Precision Actuation for Industry

Actuator Applications That Give You Flexibility

Quarter Turn Solutions For Challenging Installations.

**P2 Electric Actuator With 2
Wire Control**

Torque Switch Option

Timer Control Option

Cold Weather Kit

Our **Electric Actuators** are incredibly robust products. They can be configured for different voltage or control specifications, but also with several different options.

2 Wire Control – often found in HVAC Systems this control option allows application of power to open or close a valve or damper. Removal of power reverses the position.

Torque Switch – Factory preset torque switches for open travel and close travel protect equipment and processes in case of flow interference.

Feedback – Potentiometric or 4-20mA feedback options show position of on/off actuators.

Timer – Programmable timer slows down the rate of movement of the actuator.

Cold Weather Kit – Internal thermostatically controlled heaters keep the actuator operational in extremely cold weather down to -40° C(F).

Rotation Modification – Several rotation options such as 0-180, 0-90-180, or up to 270° for modulating control.

Extended Duty – Allows on/off actuators to operate at 75% duty cycle.

Flexibility for industrial applications!
